

Marginal $p(\mathbf{x}_{i-1} | \mathbf{x}_i)$

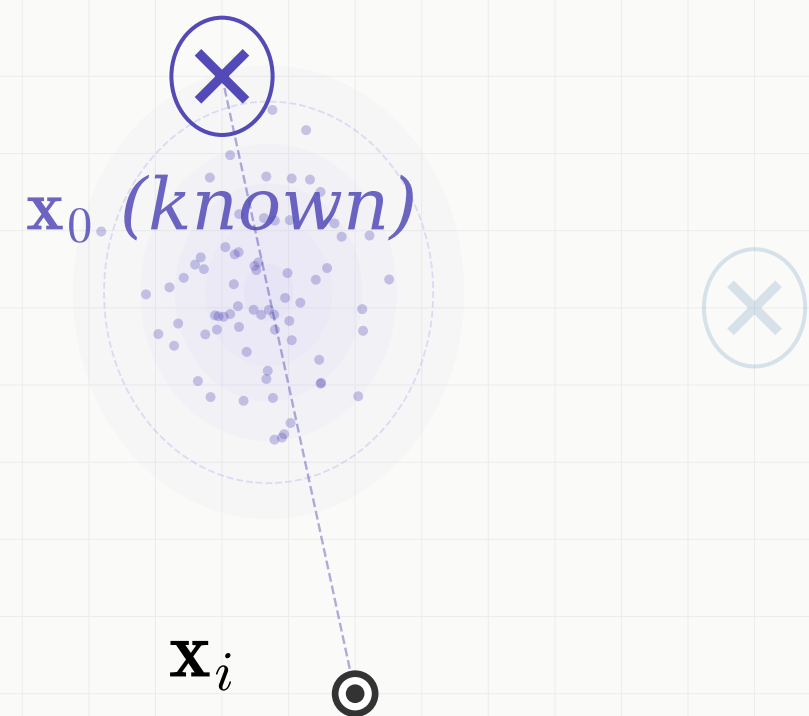

weighted mixture of all conditionals

HARD: intractable mixture

Condition on $\mathbf{x}_0$ from mode 1

$p(\mathbf{x}_{i-1} | \mathbf{x}_i, \mathbf{x}_0) = \text{single Gaussian}$

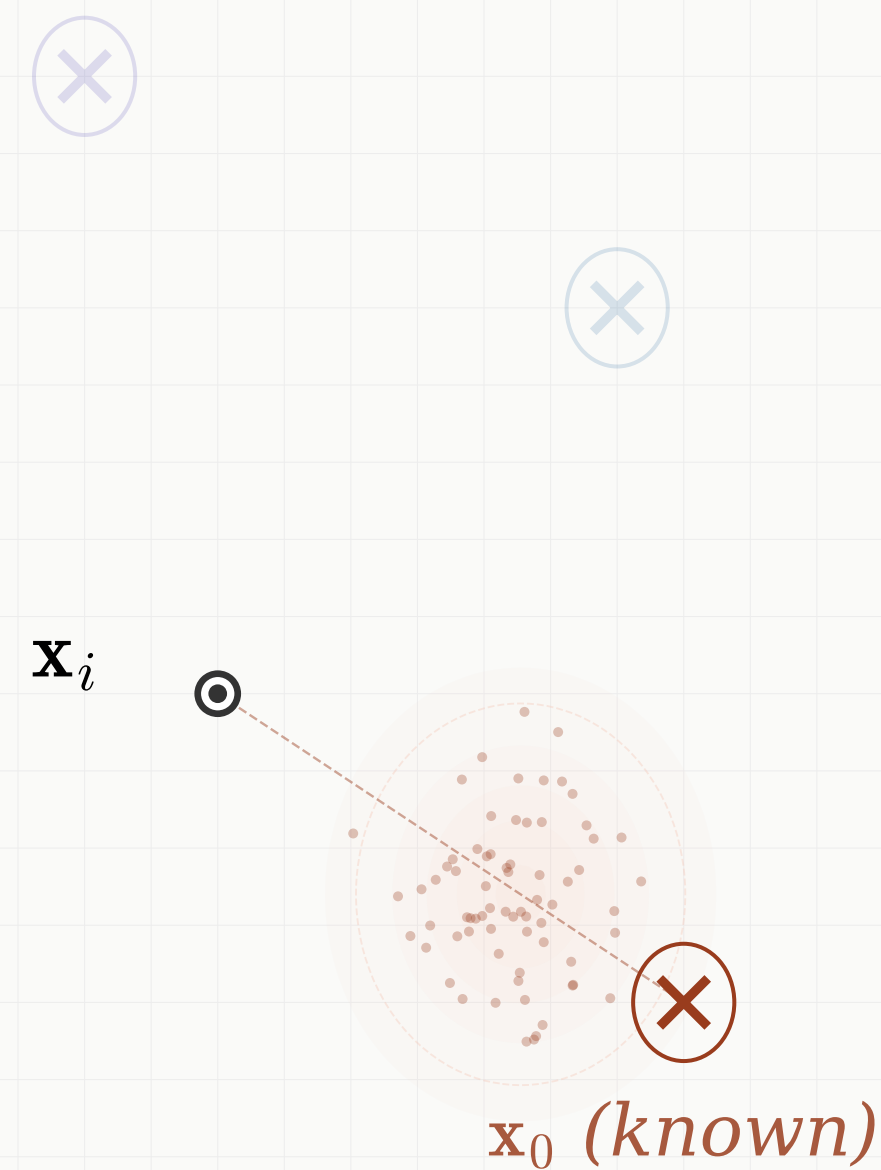

Condition on $\mathbf{x}_0$ from mode 2

$p(\mathbf{x}_{i-1} | \mathbf{x}_i, \mathbf{x}_0) = \text{single Gaussian}$

Condition on $\mathbf{x}_0$ from mode 3

$p(\mathbf{x}_{i-1} | \mathbf{x}_i, \mathbf{x}_0) = \text{single Gaussian}$

EASY: each conditional is a single Gaussian (tractable regression target)
