

Marginal $\mathbf{v}_t(\mathbf{x}_t)$

weighted sum of conditional velocities

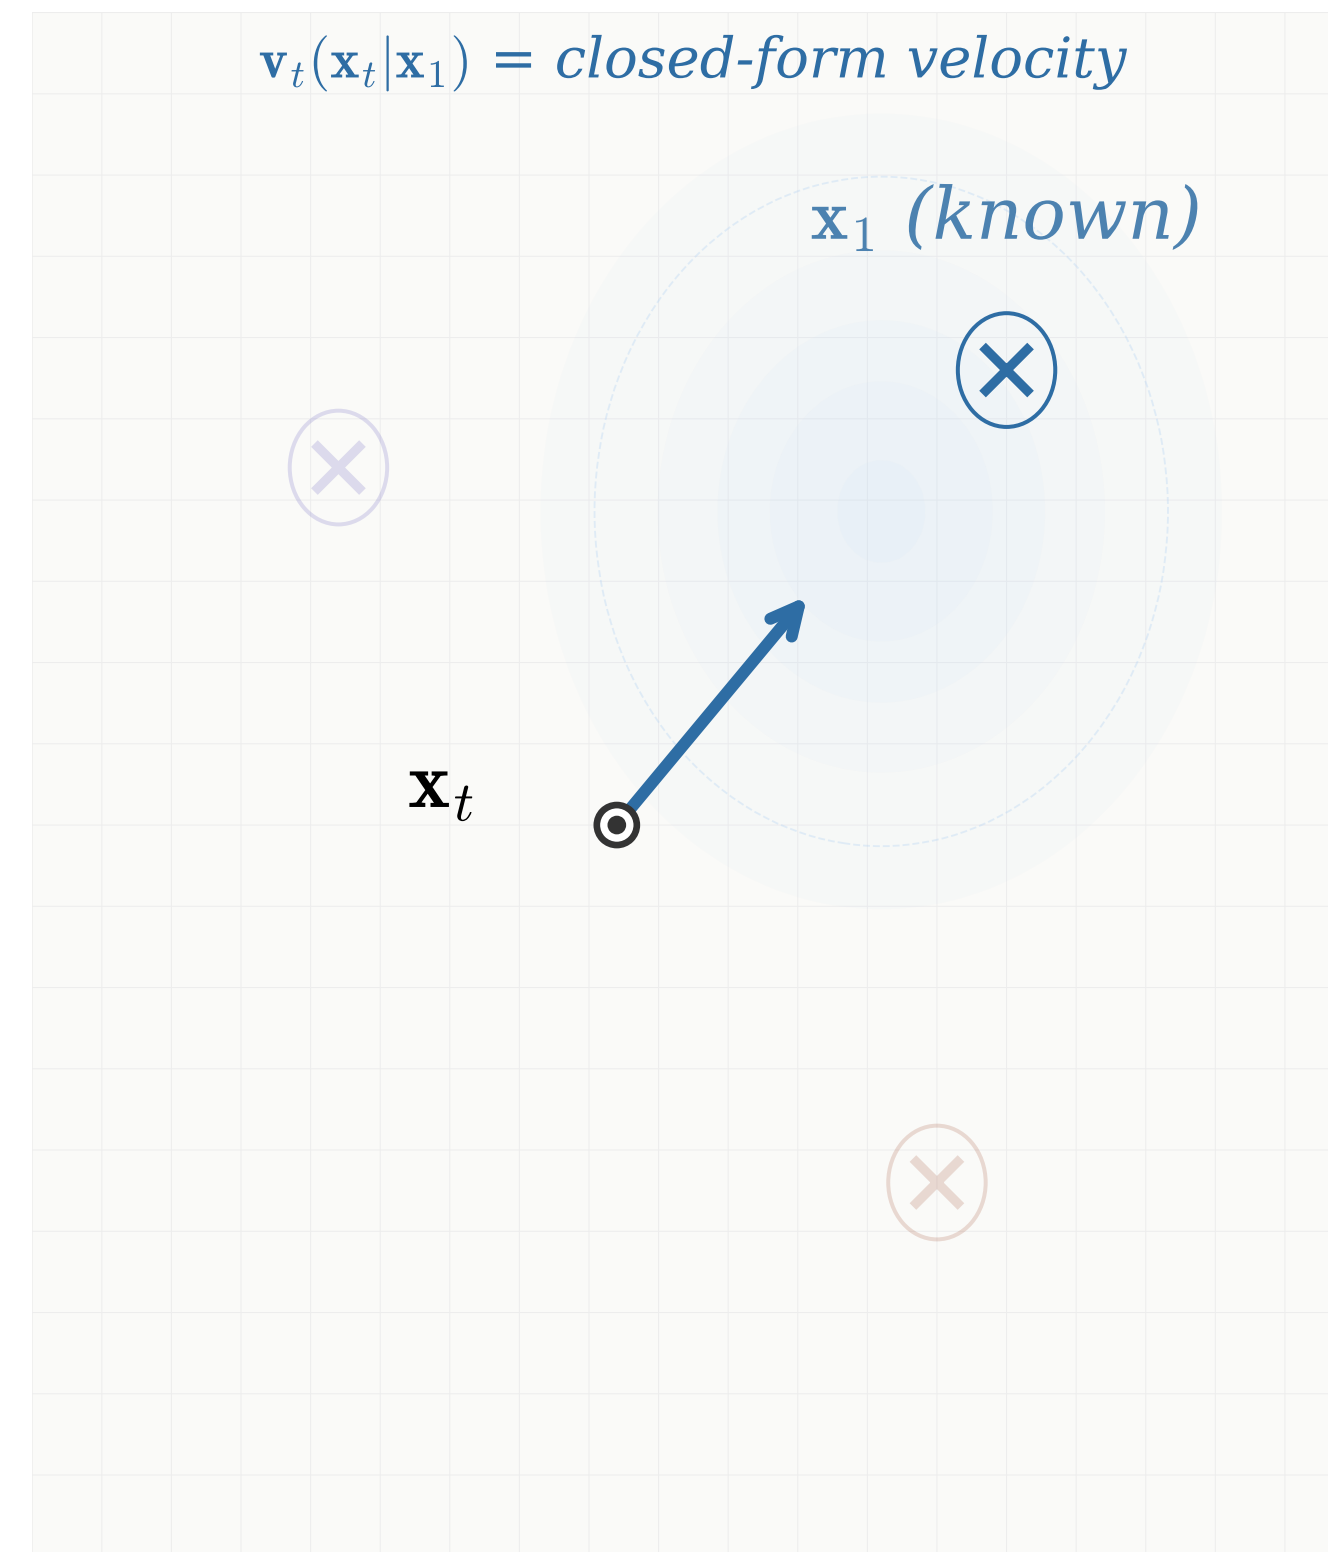

Condition on $\mathbf{x}_1$ from data 1

$\mathbf{v}_t(\mathbf{x}_t|\mathbf{x}_1) = \text{closed-form velocity}$

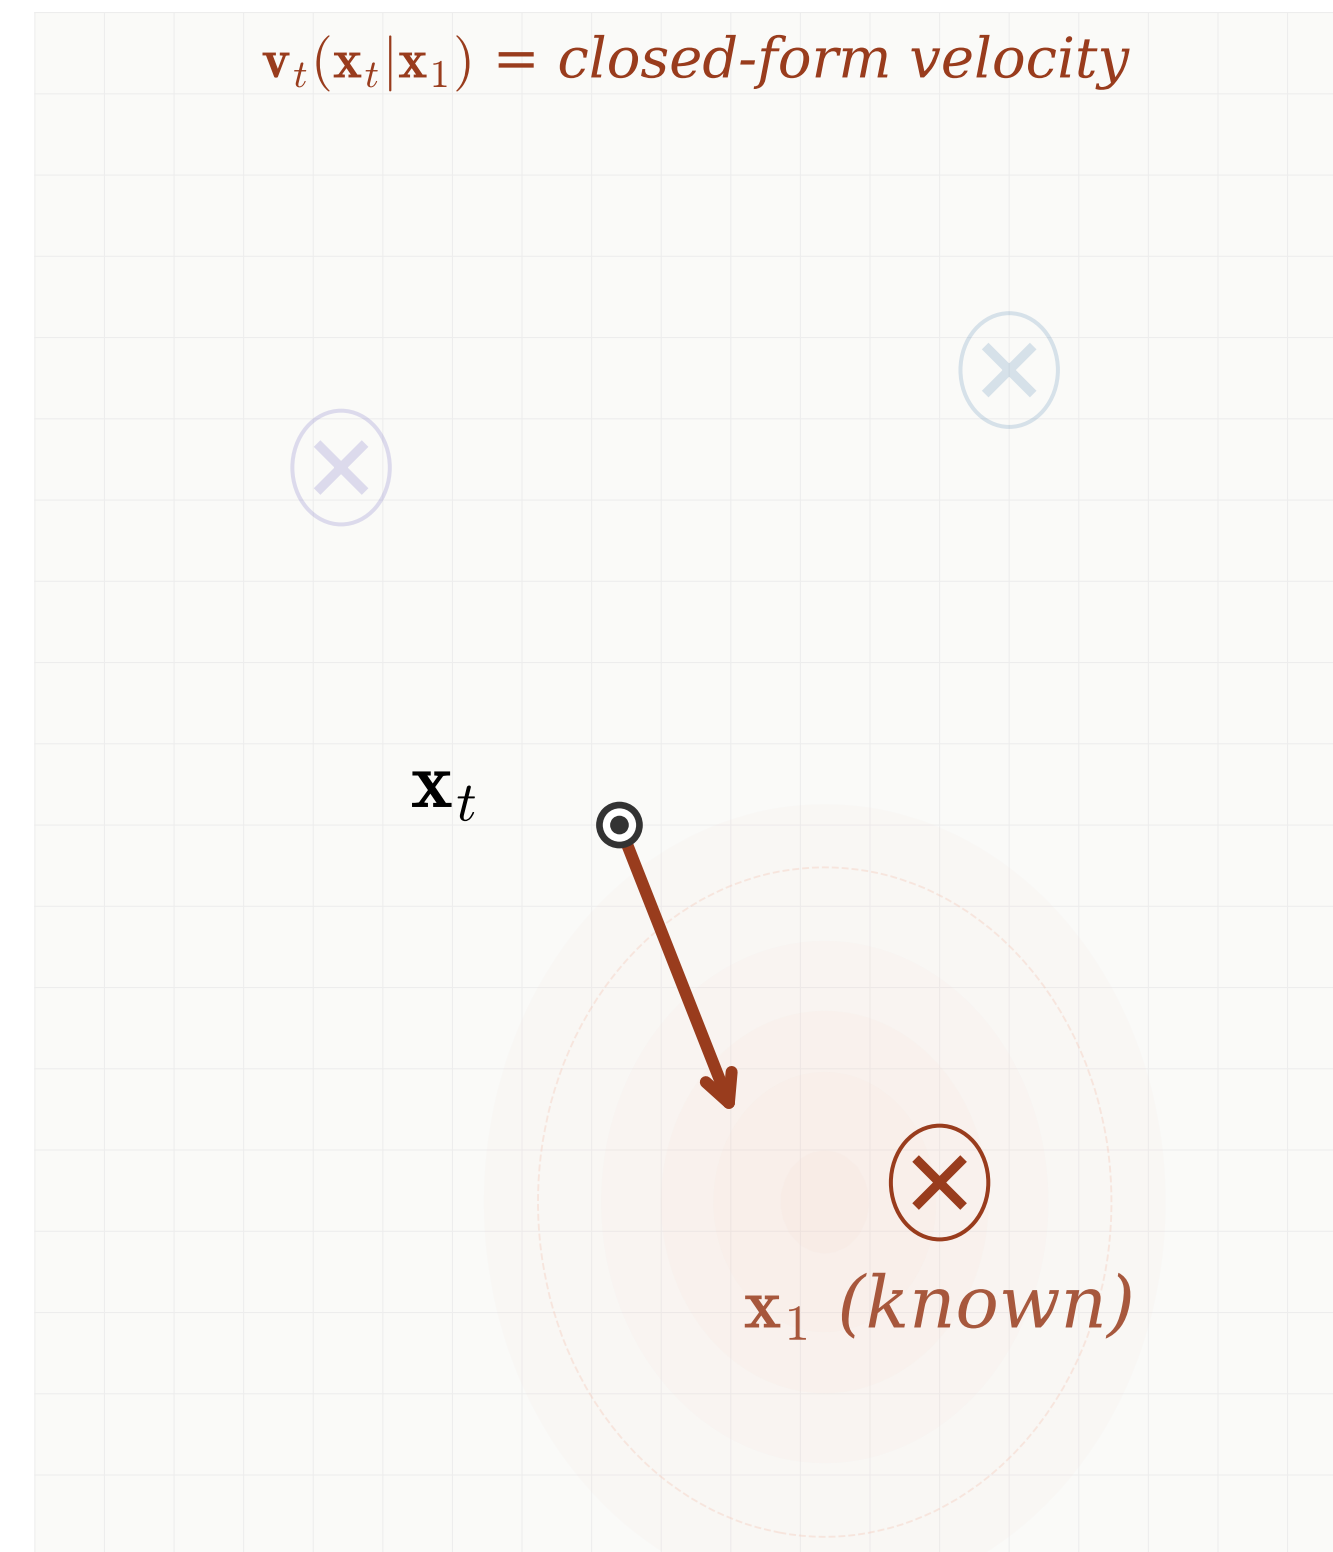

Condition on $\mathbf{x}_1$ from data 2

$\mathbf{v}_t(\mathbf{x}_t|\mathbf{x}_1) = \text{closed-form velocity}$

Condition on $\mathbf{x}_1$ from data 3

$\mathbf{v}_t(\mathbf{x}_t|\mathbf{x}_1) = \text{closed-form velocity}$

HARD: intractable weighted sum

EASY: one closed-form velocity per $\mathbf{x}_1$ (conditional flow matching)
